Quality detailing and custom features make all the difference in lifetime value with truck bodies from Cottrill.

Choosing the truck body you want is just one step toward the truck you really need for a productive life of hauling aggregates.

The heavy-duty truck and body experts at Cottrill are ready to show you how a better build, based on commitment to customer needs, can add extra value for the best return on your truck investment.

Increased productivity

Optimum payloads, smart features and attachments; built-in durability for maximum uptime.

Simple operation

Custom options to suit your work, your equipment and your roads; convenient controls for a truck that works with you.

Longer life

Trusted brand name components from end-to-end; premium finishing to keep your truck looking and working like new.

Lasting confidence

At Cottrill, we service what we sell; we take every step to make you proud to say your truck is built by Cottrill!

“Built by Cottrill”

Since 1999, Cottrill Heavy Equipment has been fabricating, integrating, repairing and servicing trucks, trailers and equipment for heavy-duty work in aggregates and soil hauling applications.

Cottrill takes pride in knowing its customers, understanding their needs and delivering the best truck solutions based on a quality build every time.

Today's top brands in specialty truck bodies trust Cottrill to install and support their products with an unrivalled commitment to customer service.

The Difference Is In The Build

Strength & Weight: Cottrill offers real choice to optimize payloads and durability with lightweight, high tensile steel bodies; complete in-shop capabilities for custom wheelbases and SPIF4 axle arrangements.

Routings: Extra attention to detail eliminates problems before they start – Cottrill takes every step to protect wiring, hydraulics and air lines from potential pinch points, abrasion and impacts.

Tailgates: Customize your truck with tailgate configurations and hinge placements to match your material type for loading and unloading needs; ask about side opening and high lift tailgate options.

Hydraulics: We install only 3-line hydraulic systems with premium grade hoses and fittings from preferred quality brands. Optional air shift diverter valve available.

Attachments: Featuring “The Shooter” conveyor placement system which allows you to have one truck do two jobs; accurately place material up to 90' away!

Finishing: The extra minutes we invest in paint pays off in years of protection for you – all components are carefully stripped and sandblasted before we prime with epoxy and finish with a tough urethane top coat.

Electrical: Cottrill designs your electrical features to run on sealed wiring harnesses and weather-tight junction boxes for worry-free operation with fast troubleshooting and easy access.

Service: Cottrill works with you for the life of your truck: warranty service; safety inspections, emissions tests, collision repairs; servicing for air, hydraulic and electrical systems; sandblasting and paint.

Lubrication: Beka-Max optional auto-greasing systems take the time and hassle out of routine servicing, so you know it gets done right!
